Alborz, Karaj.

About Me

I'm a passionate and detail-oriented Frontend Developer with strong experience in building modern, responsive web applications using React and Next.js. I have a deep understanding of state management tools such as Redux and others, ensuring seamless data flow and efficient app architecture. With a solid eye for design, I specialize in pixel-perfect implementation of Figma designs, using Tailwind CSS to craft clean, maintainable UI components.

My skill set includes integration with REST APIs and WebSocket for real-time functionalities, and I'm proficient in working with databases like MongoDB, PostgreSQL, and native SQL. I'm also familiar with Web3 development and have experience building applications for Telegram.

I bring life to interfaces using advanced animation libraries like Framer Motion and GSAP, and I'm comfortable working with modern UI toolkits such as ShadCN, HeroUI, One UI, and Headless UI to create elegant and accessible user experiences.
